

Feature Comparison – SentryBay with Key Enterprise Offerings

The following is a summary analysis of the key solutions that claim to protect users from malware, identity and data theft.

Key:

Full (or almost 100%) protection/Complete feature	Some level of protection but still security gaps/Partial feature
Limited or no Protection only/Minor feature only	

Protection/ Benefit	SentryBay's Data Protection Suite	Trusteer Rapport	Prevx	Internet Security Suites e.g. Kaspersky/McAfee/ Norton	Standard Anti-Spyware e.g. Webroot, AVG Identity Protection
Protects data entry into banking website from key logging attacks	Full protection All fields	Limited methods Password fields		Only if identifies malware	Only if identifies malware
Protects data entry into all websites from key logging attacks	Full protection All fields	Can add 5 sites		Only if identifies malware	Only if identifies malware
Protects against screen captures				Only if identifies malware	Only if identifies malware
Proactive Phishing Protection in real time		one site only – limited technique		Limited heuristics in some solutions	
Blacklisting protection (confirmed phishing sites)					
Warns users if access legitimate sites that may on-sell data					
Eradicates detected malware					
Does not affect PC performance		Can cause instability		Normally slows down PC	Can slow PC, often multiple false warnings
Works with all other security software		Not tested fully		Often clashes with other AV	
No set-up/configuration required – plug & play					

Note: From a security perspective, SentryBay is also the only solution that protects against form/text grabbing, kernel level attacks and window hook attacks in most cases.
